Another order from Baosteel for SCHADE Lagertechnik Six Combined Portal Reclaimers on their way to China

Gelsenkirchen/Gemany, May 2017

The engineers from SCHADE Lagertechnik GmbH have received more good news from the Chinese steel industry, to add to their recent increase in market share of their machines in the power industry in Asia. Teaming up with AUMUND Beijing, SCHADE secured an order from the Baosteel Iron & Steel Company for the supply of six combined reclaimers. These new machines will be installed this year and next year on the same site as two SCHADE semi-portal reclaimers supplied previously.

The two existing machines, each with a rail span of 31.5 m and a reclaiming capacity of up to 1,500 t/h iron ore, were installed as recently as 2015 at Shanghai Baosteel Group Corporation, the second largest Chinese iron and steel conglomerate. The six combined stacker-reclaimers with stackers have

an outer rail span of 56 m and are designed to stack 3,600 t/h and reclaim up to 1,200 t/h. This is the first time that SCHADE is supplying combination machines such as these for the Chinese market.

More than a dozen SCHADE semi-portal reclaimers have now been installed in steel plants in China. "SCHADE is increasing its market share and can now boast many references in China. Factors contributing to this success are SCHADE's special design elements, such as chains with external rollers, as well as its environmentally friendly configuration features, such as low energy consumption rates", says SCHADE sales director Andreas Markiewicz. Thanks to the compact construction and special design of the SCHADE machines in comparison to bucket wheel machines, stockpiles can be managed easily and economically in covered premises.

SCHADE reclaimers are enjoying more and more success on the market because, when the overall investment is considered, they combine the advantages of being safer, fully automated, more flexible, more environmentally friendly and more cost-effective than silos or bucket wheel reclaimers", continues Andreas Markiewicz.

About the AUMUND Group

The AUMUND Group is active worldwide. The conveying and storage specialists have special expertise at their disposal when dealing with bulk materials. With their high degree of individuality, both its technically sophisticated as well as innovative products have contributed to the AUMUND Group today being a market leader in many areas of conveying and storage technology. The manufacturing companies AUMUND Fördertechnik GmbH (Rheinberg, Germany), SCHADE Lagertechnik GmbH (Gelsenkirchen, Germany), SAMSON Material Handling Ltd. (Ely, England), as well as AUMUND Logistic GmbH (Rheinberg, Germany) are consolidated under the umbrella of the AUMUND Group. In conjunction with the headquarters of the manufacturing companies, the global conveying and storage technology business is spearheaded through a total of ten locations in Asia, Europe, North and South America and a total of five warehouses in Germany, USA, Brazil, Hong Kong and Saudi Arabia.
