Semi gantry type scraper loaders

This new model is used, among other applications, for emptying multi product silos.

ADVANTAGES:

- double capacity, similar products can be moved from two sides of the warehouse
- simultaneous assembly, or recovery, of two different products
- recovering from stockpile at up to 1,000 m³ per hour
- no lost hauling time, as the jib is constantly on the material

- immediate change recovering from one material to another as desired
- warehouse, or silo, can be freely entered and passed through at any time, by machines or operatives
- rails no longer covered with material
- unrestricted view of lateral conveyor belt loading from the scraper loader.
